

The Aliquam package design is our answer to modern water bottle containers. It is fully recyclable, effortlessly accessible, easily portable, and easy to fit in your refrigerator. Aliquam is the Latin word for the natural and environment—two of the things we are focusing on. Made from 100% recycled PE materials. The Aliquam believes in an eco-friendly design. Its features include a folding modular design, two handles, and perforated areas above the individual bottles. These features allow The Aliquam to give water drinkers the experience they deserve.

The way things are now, shopping for water bottle packs as a whole is an extremely cumbersome endeavor. They're difficult to carry and make room for, and even more difficult to access. Our goal is to make packaging that is accessible to everyone from start to finish.

The prototype we created showcases the accessibility we think something as essential as water should be. With the handles, perforated top, and folds, it is the pinnacle of user-friendly water bottle package design. Unlike conventional packs that are bulky and awkward, The Aliquam offers a sleek and adaptable alternative. Its compact form factor ensures it fits seamlessly in a variety of storage spaces, whether in a household fridge, office breakroom, or outdoor cooler.

Additionally, its eco-conscious construction aligns with the growing consumer demand for sustainable packaging solutions. We understand the impact of single-use plastics on the environment, and The Aliquam was designed with recyclability and waste reduction in mind. By prioritizing usability and sustainability, The Aliquam represents not just an improvement in packaging but a step forward in how we approach bottled water consumption.
